

SMD Temperature Compensated Crystal Oscillator (PLUTO)

A series of surface mountable 7.0x5.0mm Temperature Compensated Voltage Controlled Crystal Oscillators (TCVCXOs) for medium to high volume applications where small size and high performance are prerequisites.

**Product description**

The CFPT9000 uses Rakon's proprietary ASIC 'Pluto™', a single chip oscillator and analogue compensation circuit, capable of sub 0.2ppm performance over an extended temperature range. Its ability to function down to a supply voltage of 2.4V and low power consumption makes it particularly suitable for mobile applications.

When in tristate mode, the output stage is disabled, but the oscillator and compensation circuit are still active (current consumption typ. \leq 1.0mA). Availability of tristate and the tristate control pin number will depend on the outline selected (P1~P4). Alternative pin configurations may be available upon request - please contact the sales office: sales@rakon.com.
